**Exercise set 7**

- 1 Let  $\mathcal{H}$  be a Hilbert space and  $(x_n)$  a sequence in  $\mathcal{H}$  converging weakly to  $x$ . Show that the following statements are equivalent:
  1.  $x_n$  converges strongly to  $x$ .
  2.  $\|x_n\|$  converges to  $\|x\|$ .
- 2 Let  $A$  be a subset of a Banach space  $X$ .
  - a) Show that  $A$  is relatively sequentially compact, then  $A$  is bounded.
- 3 Show the following statement about sets  $A$  in a Banach space  $X$ .
  - a) A bounded set  $A$  is relatively weakly compact if and only if the weak-\* closure of  $A$  in  $X^{**}$  is in  $X$ .
- 4 Give an example of a set  $Y$  in a normed space  $X$  that is closed but not sequentially weakly closed.
